Quote Calibration — worked example

> **EXAMPLE ONLY.** Sample yard and sample rates to show the formulas. Replace every number with your own before quoting.

Sample yard

INPUT	SAMPLE VALUE
Yard	Medium lot, 6,000 sq ft turf, 2 beds, 6 sprinkler zones
Total minutes on site (timed)	180 min
Loads to dump	2
Dump fee per load	$30
Round-trip drive to dump	40 min
Crew rate ($/hr, sample)	$45
Drive rate ($/hr, sample)	$60
Gear / fuel flat per visit	$20

Math

LINE	FORMULA	AMOUNT
Labor hours	180 ÷ 60	3.00 hr
A · Labor $	3.00 × $45	$135.00
B · Haul $	2 × ($30 + 40 min × $60 ÷ 60)	$140.00
C · Gear/fuel $	flat	$20.00
D · Friction +15%	(A+B+C) × 0.15 = $295 × 0.15	$44.25
Subtotal (A+B+C+D)	$295 + $44.25	$339.25
Margin +15%	$339.25 × 0.15	$50.89
Total before rounding	$339.25 + $50.89	$390.14
QUOTE — nearest $25	**$390.14 → $400**	**$400**

Reading the result

Friction is applied before margin, as the worksheet says. The sample quote is $400 for this yard. Before you send any quote, check it against your floor: your hourly rate times the hours, plus haul, must sit under the quote. Practice runs go in the log so the next yard can be compared with it.
